Rain Water Harvesting

All plants, animal and human being need water to stay alive. But human being depends on water more than plants and animals. By keeping these thoughts in mind we decided to implement water conservation in our college. The main objective of rain water harvesting is to make water available for future use. By increasing ground water level.

We take simple measures to stop run off rain water, stop run off stabs and use proper water for daily use. College use to repair leakages of water in college campus. In this way college apply water conservation in the college.
